## RESEARCH INTERESTS

My research experiences have allowed me to acquire knowledge in several general areas of mechanics and materials. The associated keywords may include thin film mechanics, surface phenomena, interface mechanics, 2D materials, strain-coupled physics, and nanocarbon-based composites. Most of my published works have concerned with the mechanics of thin solids and liquids, particularly focusing on elasticity metrology, elastocapillarity, wrinkling instability, adhesion, and friction. In general, I am interested in understanding various aspects of how slender solids deform when interacting with other objects, including liquids, and rigid and deformable substrates.
